About this Summary

The online job posting data in this summary is from Burning Glass Technologies. When citing Burning Glass data use: Burning Glass Technologies Labor Insights. Other important information to note where applicable: time period, core IT occupations, location (e.g. US, Chicago MSA), etc.

The data highlighted in this summary was pulled July 2014 and primarily focuses on Q2 2014 data for **IL and the Chicago** metropolitan statistical area (MSA), i.e. the Chicago-Joliet-Naperville, IL-IN-WI MSA. Additionally, data highlights for the entire US are included. This information complements many other workforce-related research studies CompTIA produces (see Additional Resources).

For the purposes of this summary, core IT occupations include positions related to those listed in the following tables. This report excludes certain telecommunications occupations, such as positions responsible for installing or maintaining cellular towers. Additionally, this report excludes 'knowledge worker' type positions, such as technical writer and graphic designer.

Job posting data is a useful, but an imperfect proxy for job demand.

Not every posting translates to a new job; hiring firms may change their plans, post multiple times for the same job, hire internally, try different approaches to find the right candidate and so forth (see Notes area). Also, one ad may be posted for multiple openings.

Burning Glass Technologies Labor Insights addresses many of these issues, but not all.

Additionally, within a time period, there may be situations where a worker is hired, the person isn't the right fit and is let go, and a firm starts the process over again. In the aggregate there is single position, but using job posting data, it may appear there there 2 positions (see labor turnover data to gauge the frequency of this practice).

CompTIA recommends using job posting data in conjunction with BLS data to get a more complete picture of labor dynamics for a given occupation category

CompTIA is responsible for all content contained in this report. Any questions regarding the study should be directed to CompTIA Research & Market Intelligence staff at research@comptia.org.

Key Summary Points – U.S.

Job Openings

- During Q2 2014 there were 648,016 core IT job openings in the US, according to Burning Glass Technologies Labor Insights.
- In comparison to the entire US job market, there were 6,072,429 total openings for the same Q2 2014 time period.
- IT postings represent 11% of all job openings (up from 10% in Q1, 9% in Q4 & Q3 2013).
- IT postings have grown by 35% over the same Q2 last year. Note: not all postings translate to a hire. It's important to also consider net separations (job loss) and net hires (job gains) to fully understand the IT jobs landscape.

Employment / Unemployment

- According to the Bureau of Labor Statistics (BLS), the U.S. unemployment rate for June 2014 declined by 0.2 to 6.1 percent (6.3 percent in May).
- Compared to the national unemployment rate, the rate for computer related occupations remains low at 3.6 percent for June.
- In the month of May, an estimated 4.6 million job openings existed versus 9.8 million* unemployed people looking for work (9.5m in June). The hires rate (3.4%) and separations rate (3.2%) were essentially unchanged in May. Over the 12 months ending May 2014, hires totaled 55.3m & separations totaled 53.0m, yielding a net employment gain of 2.3m.

Labor Force Turnover: New Hires & Separations

Starting Point Q1 2013

Ending Point Q1 2013

NET gain of +9,000 IT service/solution provider firm jobs

Labor Force Turnover Background and Context

- The U.S. labor force is dynamic with a constant state of hiring and separations. Workers may leave an employer for a new opportunity, geographic relocation, family needs, retirement, or any number of other reasons. Similarly, employers may layoff workers because of poor economic conditions, performance, structural changes in their product lines or any number of other reasons.
- During any given quarter, approximately 10-15% of the national labor force separates from their employer, either voluntarily or involuntarily. In a growing economy the number of new hires will exceed the number of separations as employers add new headcount. Conversely, in a contracting economy, separations exceed new hires.
 - Separations in the IT services sector (encompassing solution providers, MSPs, VARs, integrators, customer software development services and related) are about 24% lower than the national average. This may stem from IT professionals being more career oriented or being attracted to the higher than average wages. Industry sectors such as fast food, retail and hospitality tend to have highest rates of labor turnover.
- The civilian labor force participation rate was unchanged at 62.8% in June 2014 (same rate for 3rd consecutive month).
- Total nonfarm payroll employment rose by 288,000 in June 2014. Over the past 3 months, job growth averaged 272,000 per month. In June, employment growth was widespread, led by gains in professional & business services, retail trade, food services & drinking places, and health care.
- Professional & business services added 67,000 jobs in June. With 8,000 jobs added in management & technical consulting and 7,000 jobs added in computer systems design & related services.
- As of May, there were 4.6m job openings, slightly up from 4.5m in April. The hires rate (3.4%) and separations rate (3.2%) were essentially unchanged in May. Over the 12 months ending May 2014, hires totaled 55.3m & separations totaled 53.0m, yielding a net employment gain of 2.3m.

(45% of 31,077 do not specify education.)

Section 5: US IT Employment & Future Outlook

IT Industry Employment vs. IT Occupation Employment

An estimated **5.73 million workers** were employed in the U.S. information technology industry in 2013. This includes technical and non-technical positions in employer firms and non-employer firms.

Within the IT industry, there are many IT occupations.

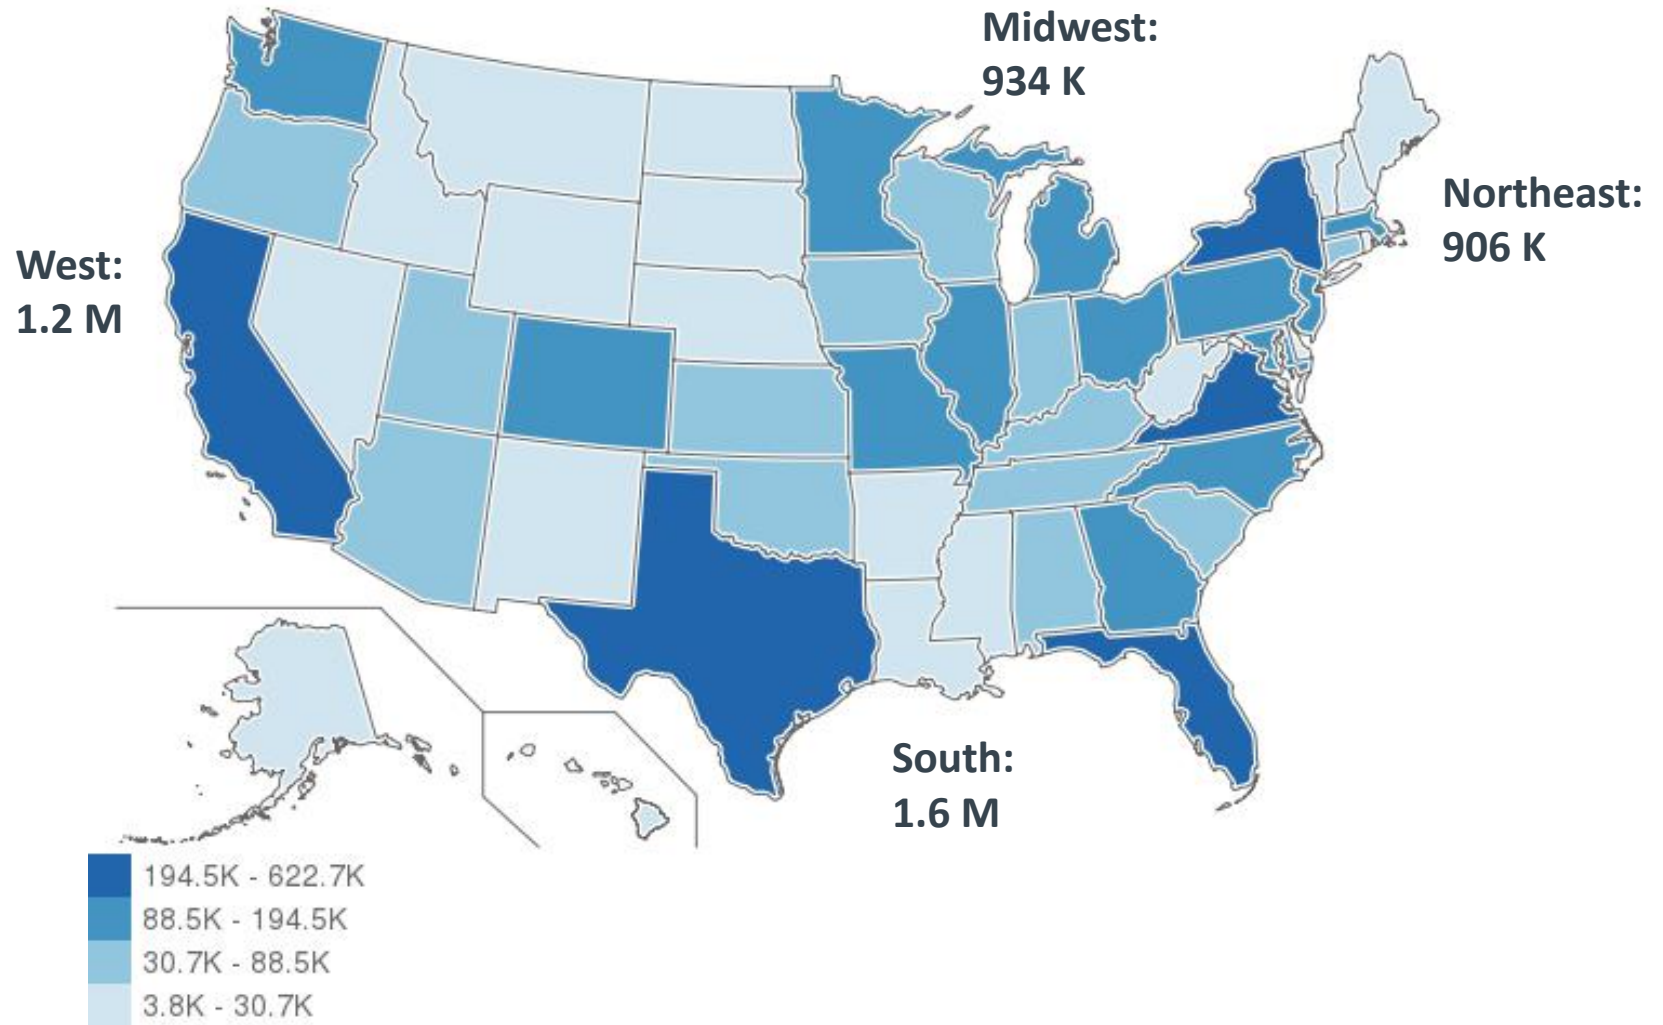

An estimated **4.74 million workers** were employed in core IT occupations, across the full spectrum of U.S. industry sectors and the government sector in 2013. This figure includes non-employers, such as the self-employed or sole proprietors.

Number of U.S. Workers in Core IT Positions

SOC Code	Job Description	Employment Count – Employer Firms	Employment Count – Sole Proprietors	2013 Total
11-3020	Computer and Information Systems Managers	319,852	30,431	350,283
