

Oral Presentation

Goal: Create and deliver a presentation with FOCUS, ENERGY, and PASSION.

Scientists present their research in a clear, professional, and compelling way.

Oral Communication:

Think about speeches and presentations that you have given or watched. Write down:

1. One speaking skill that is your **strength**:
2. One that you have **most improved** in:
3. One that is still a **weakness or struggle**.

Characteristics of Effective Presentations:

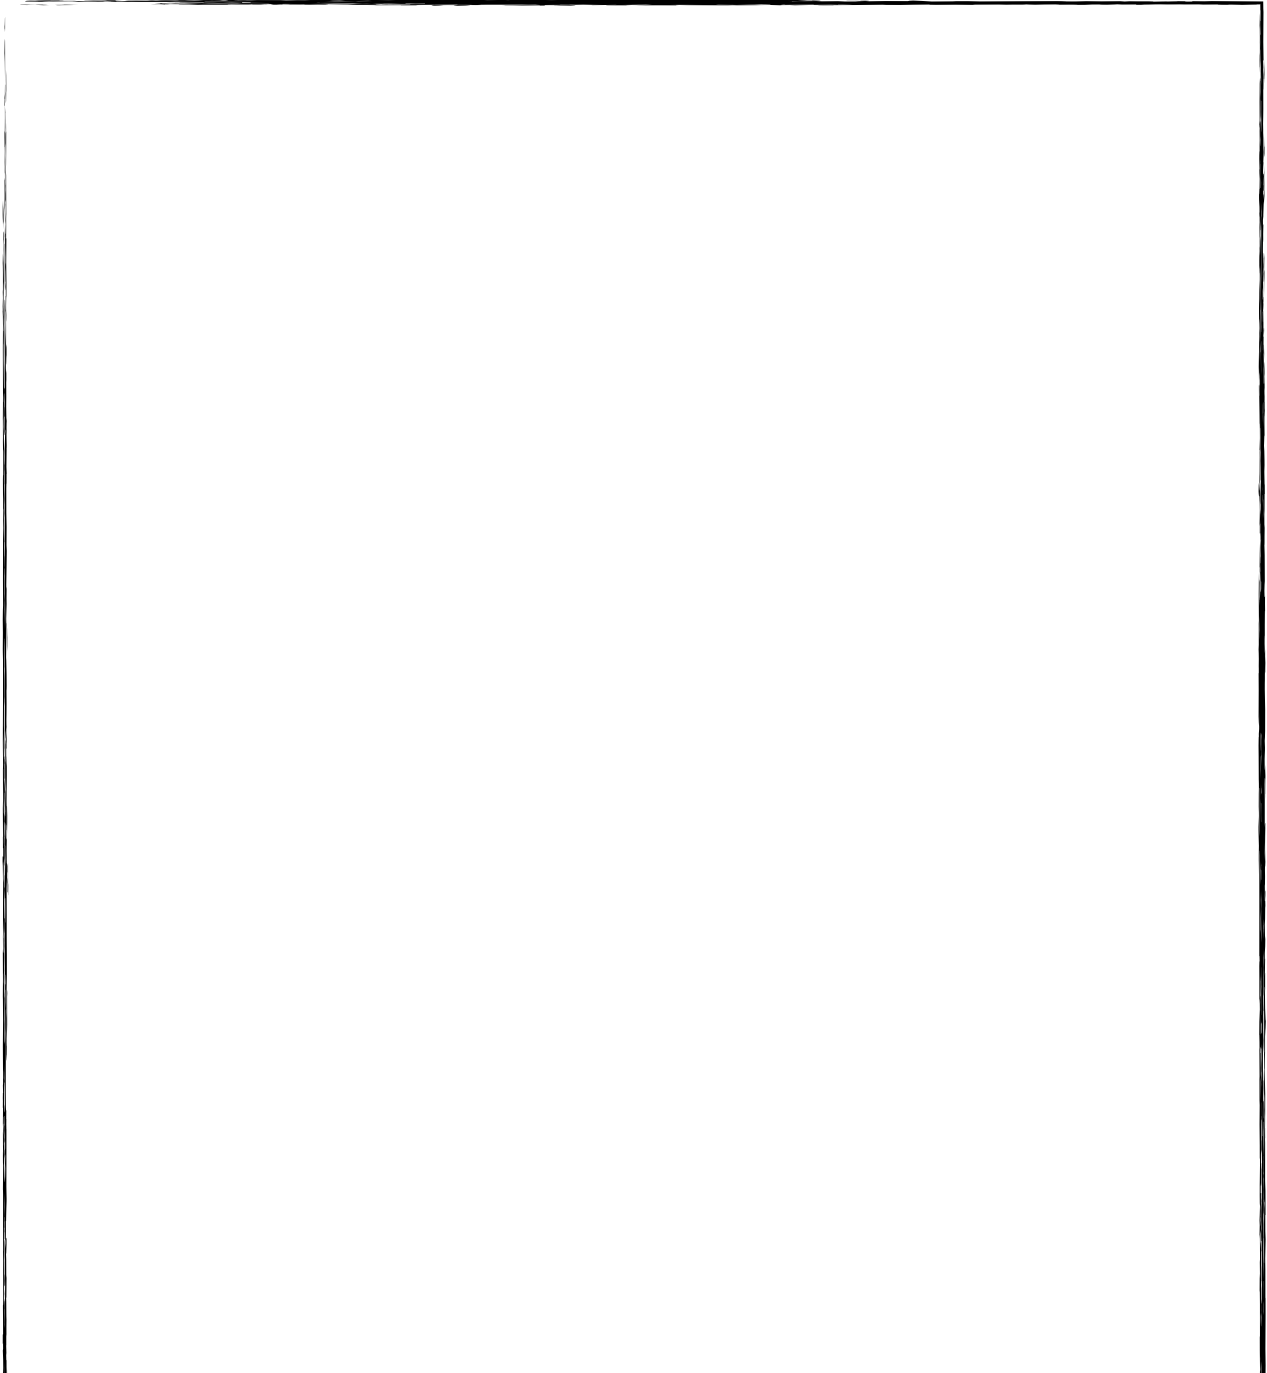

What makes a PRESENTATION great?

Presentations:

- Present your project in a clear, compelling, and professional way.
- Suggested presentation length: 5-7 minutes with 2-4 minutes of Q&A.
- You will be graded on visual aid & oral presentation skills

Outlining:

In the space below (or on a separate sheet or Powerpoint slides), make a detailed outline of all of the components that should be included in your final presentation. To be ready for college, you need to be able to anticipate and predict what goes into a quality paper or presentation, so this is your chance to practice this skill. You will have a chance to check this outline against the requirements at next class. Your outline will be graded for effort and quality.

Prepare:

Outline or write the first minute of your oral presentation:

First Minute:**Present:**

Present the first minute of your oral presentation to a partner and get their feedback:

Feedback:

Positive	Constructive

If time permits, repeat this exercise for the last minute (conclusion) of your presentation.
